Norwood

CILLS - ANCILLARIES - ASTRAGALS

-
- > Part of a technically advanced suite of windows & doors
 - > Timber and AluClad variants
 - > Available in full range of RAL colours
-

TECHNICAL DESCRIPTION

TIMBER

All timber ancillaries are manufactured from engineered PEFC certified softwood timber, which is laminated & finger jointed to provide the highest consistency of quality and stability

ALUCLAD

The AluClad versions, available in the full range of RAL colours, creates an external 'weather shield' for the timber thus providing a highly durable external finish which is easy to maintain and very modern in appearance. This provides a best of both worlds option for customers wanting the natural appearance and warmth of timber internally, and a sleek, robust, low maintenance finish externally.

PAINT & PRESERVATIVE

Using Teknos water based coating systems Norwood timber windows can be supplied in any NCS or RAL colour including dual colour. All timber is treated with Teknos timber preservative to provide protection against wood destroying and wood discolouring fungi, and satisfies the performance requirements of EN599-1 .
COLOUR OPTIONS The standard product colour in both timber and Aluclad options is white (NCS S 0502Y) and windows are also available in most recognised RAL or NCS colours including metallics.

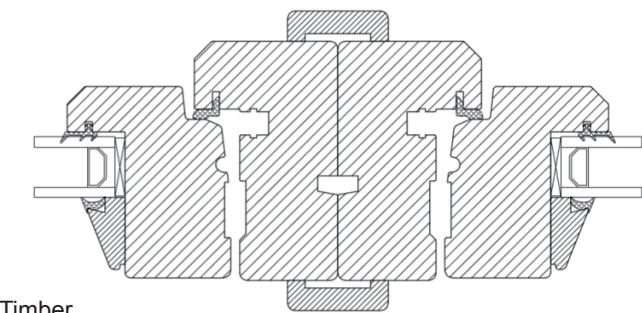

MARKET SECTOR PRODUCT SUITABILITY

Norwood Windows products and ancillaries are designed to provide outstanding solutions for the following market sectors:

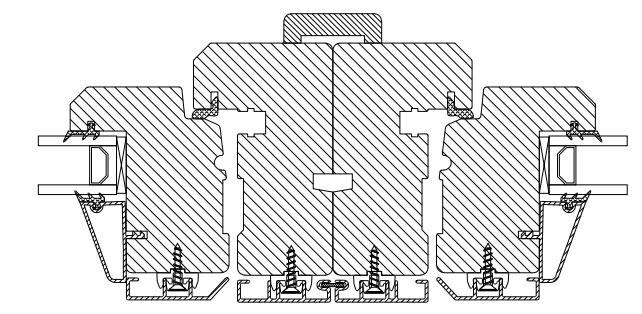

- Offsite Construction
- Commercial Installations
- Home Improvement and Self Build Installations
- New-build Construction

COUPLING COVERS

The system comes complete with timber and aluminium optional coupling covers – where required for site application. These covers can be used both vertically and horizontally. Horizontal joints include an aluminium drip profile.

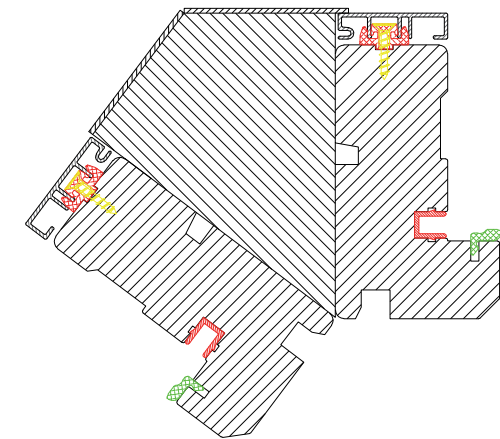

Timber

With aluminium.

CORNER POSTS

There are 90 degree and 135 degree corner post options available for use with our timber and AluClad systems.

CILLS

Norwood Windows offer a choice of cills in both timber and aluminium. Many customers choose aluminium cills for timber windows due to the superior weathering on this exposed surface. Our two-part cill system is supplied loose for fitting on site. Below are the projections from the face of the frame.

TIMBER CILLS

46 mm
Projection from face of timber frame: 39 mm

63 mm
Projection from face of timber frame: 57 mm

95 mm
Projection from face of timber frame: 89 mm

PPC ALUMINIUM

77 mm
Projection from face of timber frame: 59 mm
Projection from face of aluclad frame: 48 mm

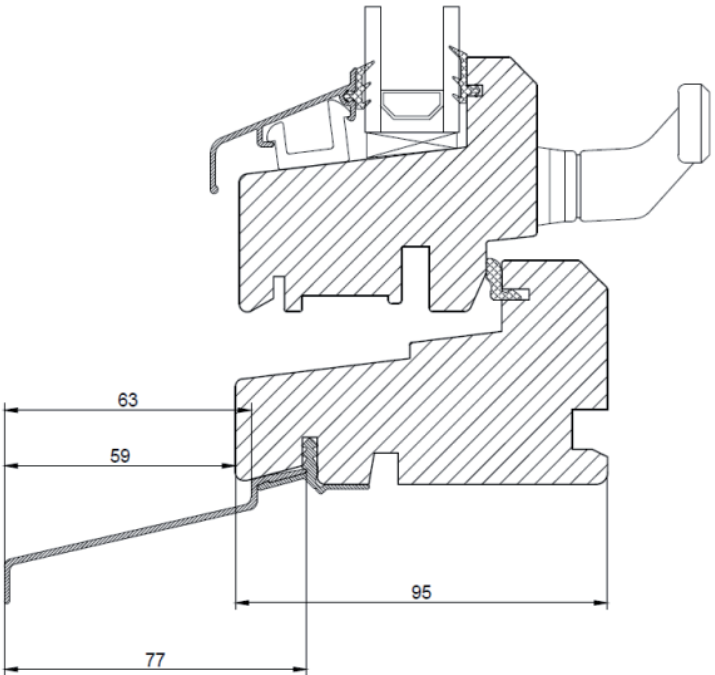

98 mm
Projection from face of timber frame: 80 mm
Projection from face of aluclad frame: 69 mm

114 mm
Projection from face of timber frame: 96 mm
Projection from face of aluclad frame: 85 mm

157 mm
Projection from face of timber frame: 139 mm
Projection from face of aluclad frame: 128 mm

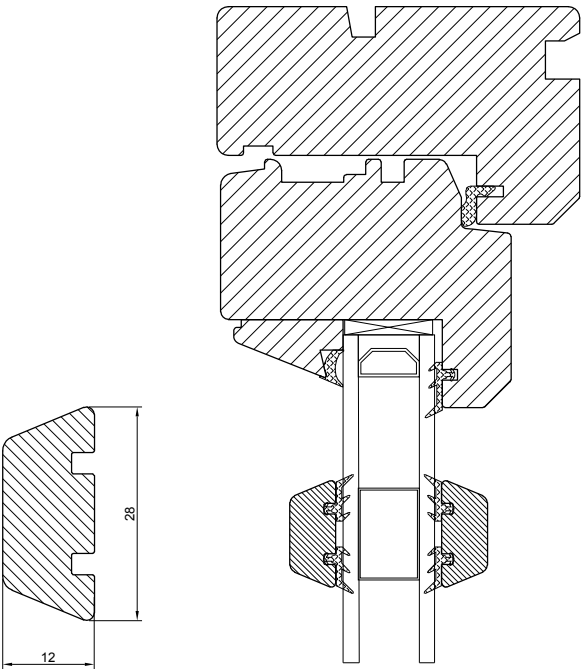

186 mm
Projection from face of timber frame: 168 mm
Projection from face of aluclad frame: 157 mm

>186mm should be sourced locally

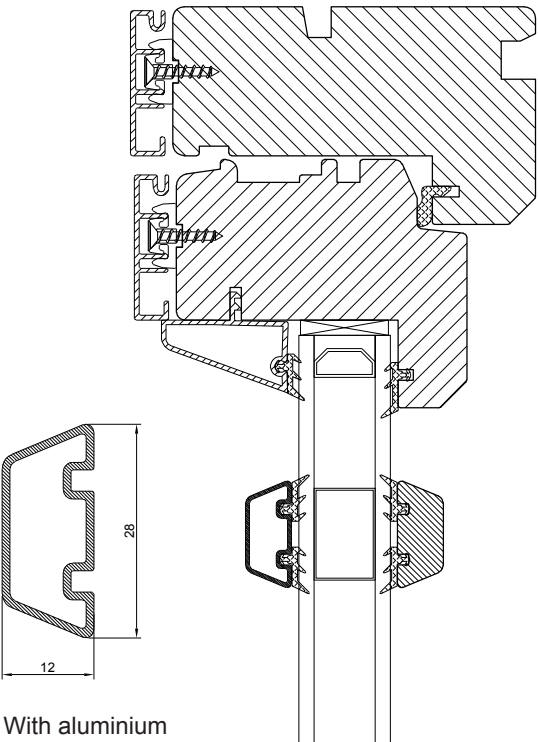

ASTRAGAL OPTIONS

We offer a range of astragal options to suit your requirements, including a range of astragal bar options, including the opportunity in both timber and aluminium to have astragal bars to the external pane of the sealed unit only, within the sealed units, and to be fitted in association with a Duplex spacer bar to give the appearance of individual panes within a sealed unit.
